

Renewable Energy Association of Turkey (EUROSOLAR Turkey) promoting energy end-use efficiency and 100% renewable energy has been organising the International 100% Renewable Energy Conferences (IRENEC) for 5 years and will hold the 6th IRENEC conference in May 26 – 28, 2016 in Istanbul.

The countries which are aware of the importance of transforming the existing fossil and nuclear based energy systems to future efficient and renewable energy based systems are doing research and development of intermittent and high entropy nature renewable energy sources and their related technologies. Research and development and commercialization of renewable energy technologies, smart grids, renewable energy storage, grid integration, electrical vehicles, LED lighting, renewable energy heating and cooling, renewable energy aviation, renewable energy electricity and hydrogen production and other implementations of R&D will be the main topics of the 6th International 100% Renewable Energy Conference (IRENEC 2016).

With the existing huge renewable energy resources, Turkey will be a leading country for renewable energy development and implementation. Thanks to its geographical location, Turkey has access to MENA (Middle East and Northern Africa), Southeast Europe, Iran, China, Russia and Ukraine and it is a hub of commercial activities in those regions. The companies which are already experienced in implementation and development of renewable energies as suppliers, project developers, utilities will find their partners and business opportunities at IRENEC. Turkish universities and institutes are in a position to build consortiums for applying European funds on IRENEC topics. Renewable energy integration starts from local municipalities and therefore the representation of the experience of already %100 renewable cities in IRENEC will provide conditions for cooperation among municipalities for the global transition to %100 renewable energy.

Therefore we invite all parties to consider being a part of IRENEC 2016 as a presenter, sponsor, supporter or participant. As EUROSOLAR Turkey, we would like to see you as one of our sponsors for IRENEC 2016, 6th International 100% Renewable Energy Conference, which will be held on 26 – 28 May 2016 in Istanbul, Turkey. We submit our sponsorship file attached for your consideration and we are looking forward to receiving your favorable response.

Kind Regards

Prof. Dr. Tanay Sıdkı Uyar

Conference Chairman, IRENEC 2016, International 100% Renewable Energy Conference

President of The Renewable Energy Association of Turkey, EUROSOLAR Turkey

Head of Energy Section, Marmara University
